

Carbon structural reinforcing

Monopoles reinforced with carbon laminate to reinforce against increased windage resulting from new NBN equipment

Monopole strengthening- Carbon laid in place before overcoating with UV membrane

Cantilever balcony capacity and stiffness upgrade with carbon laminate

Domestic slab was understrength and was over a rock. The slab was cracking due to hogging. Cracks repaired and slab substantially reinforced against hogging stress with unidirectional carbon fibre fabric

Bridge abutment repair and strengthening- Placing the carbon laminate

Bridge abutment concrete repair, crack repair followed by 5 x double layer of carbon laminate and UV membrane over

Bridge soffit -upgrade of capacity with carbon fibre laminate

Severely cracked suspended floor, repaired and stitched using unidirectional carbon fibre

Waffle pod soffit to suspended floor. Shear stress capacity increase with unidirectional carbon fabric

Very cramped working, and there was a lot of it.

Structural beam reinforcing to upgrade load capacity of suspended slab

Sand filtration plant filter bed support structure reinforced with laminate and fabric – very confined space work

Maintenance Systems Pty Ltd has in place:

- * Public Liability Insurance
- * An operating OH & S Policy
- * Confined Space Certification
- * Quality Assurance proceeding under
- * Workers Compensation Insurance
- * An operating Environmental Policy
- * Staff trained to workplace 2 First Aid
- * Membership of International Concrete Repair Association
